

Martin International Investing

Martin International Investing, launched in 2008, is a focused international core equity strategy that invests in 25 to 30 high quality companies with market capitalization above \$2 billion.

Benchmark: iShares MSCI EAFE ETF

Our edge is Martin's active, timetested, and repeatable investment process driven by our **team's combined (90+ years) portfolio management experience** and disciplined fundamental, valuation risk management, and proprietary research. The strategy is designed to benefit from a long investment horizon with historical turnover of less than 20% annually, which supports tax efficiency.

Philosophy and Process

Quality and valuation are dually important factors considered during the investment process. Through the firm's proprietary research of fundamental factors, companies are evaluated on **positive free cash flow, high returns on equity, and low leverage**. Intangible factors such as physical and transition risks are integrated into the process as a quality check to assess both tangible and intangible assets or drivers of potential risks. Macro research provides a perspective on individual equity markets and geopolitical risks. We believe that where a company's products/services are sold is more important than where a company is domiciled.

Portfolio Construction

The concentrated international equity portfolio holds 25 to 30 equity positions through a disciplined implementation of the firm's philosophy and a review of portfolio diversification to help reduce business correlations. **A high bar for security inclusion** is required as initial position sizes are typically 4% of the portfolio with no sector limits. Risk controls include limits on position sizes and industry exposures. Liquidity is a criterion for investments, and positions are monitored for ease of purchase or sale. Currencies are not hedged. Positions undergo a continuous research process for valuation and growth expectations. Shifts in business fundamentals are assessed alongside new opportunities. The consistent fundamental approach and commitment to quality investing tends to provide favorable downside capture in volatile markets.
